RE: Conditions of Authorization to Use Oily Waste for Road Dust Control

Dear Mr. Molchan:

I have reviewed this matter with the Director of the Solid Waste Administration and it has been concluded that the following procedures must be adhered to obtain an authorization to use waste oil for road dust control:

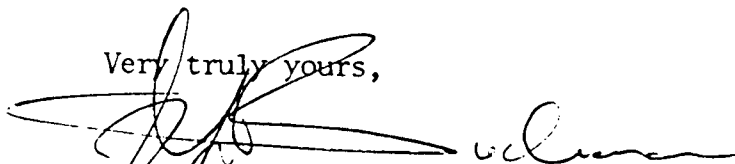

- (1) The individual or corporation who must obtain authorization to apply waste oil for road dust control is the collector/hauler who hauls the waste oil to the site of application. This requirement places responsibility for violation of the conditions of authorization or of the rules of the Solid Waste Administration on a business entity presently licensed by the Solid Waste Administration and which has physical assets.
- (2) Analysis of each waste oil stream must be submitted to and approval obtained from the Solid Waste Administration prior to commencing road application.
- (3) A Special Waste Manifest shall accompany all loads of waste oil in accordance with N.J.A.C. 7:26-1 et seq. The name and address of the application site be written on the manifest as well as the date of application.
- (4) Advanced written notice shall be provided to the Administration's approval obtained for all sites under consideration for road oiling. This shall include the site name, address and anticipated frequency of road oiling.
- (5) The application rates of waste oil are not to exceed one-half gallon per square yard of road surface area.

- (6) Such waste oils are not to be spread immediately prior or subsequent to any form of precipitation.
- (7) Such waste oils are not to be applied so as to cause ponding.
- (8) Any oil that runs off into erosion or runoff control ditches, must be collected and reused for dust control.
- (9) Such dust control method shall not be used within 100 feet of a creek, river, stream or other surface water body, nor directly adjacent to sewer inlets or potable water wells.

Upon fulfilling the above requirements, the hauler will forward a copy of the authorization to use waste oil for road dust control, to the manager or person in charge at the location's address, to be kept available on request.

The collector/hauler and/or landfill operator are responsible for proper dust control pursuant to N.J.A.C. 7:26-2.5.7 and must comply with all other applicable regulations.

Very truly yours,

Mike
Dear Mr. Rosenberg:

Enclosed you will find copies of letters submitted to us by R & R Sanitation Service. This Corporation delivers a mixed oil and water emollient that is used to control dust generated at both landfill sites.

Application to the roads are made bi-monthly during the drier periods of the season.

If the enclosed information is insufficient or if you require further information please do not hesitate to contact me.

Very truly yours,

G. A. Molchan

Attn: Mr. Gary Machan

Dear Sir:

The oil and water we will be spraying on the roads
at the landfill for dust control will not contain any
chemical waste.

We shall furnish letters from the generators stating
there is no chemical waste in the oil.

Very truly yours,

R & R SANITATION SERVICE

Dear Mr. Norman:

The liquid you are picking up at location above does not contain any chemicals. It is water and oil mixed because of a fractured pipe. It is called Sun #4 Oil which is used for cooling.
